**What You know that computers are essential to keeping your company running smoothly and profitably. For you to keep a sharp competitive edge, you need technology on your side. Providing you with reliable High-Speed Internet Access, quality Web Hosting and superior Technical Services is our goal. Educating and informing customers of the best technological solutions for their business, along with dedicated customer service, is what Gear 3 Technologies is all about. It's that simple. Technical Services**

Gear 3 provides technical consulting, service and management for PC, Macintosh, as well as, all your networking needs. Keeping your computer systems and your network operating at peak performance is our goal.

-- Read about our Associate Program Troubleshooting - PC & Macintosh Systems

Here at Gear 3 Technologies we are experts in troubleshooting and preventative maintenance. We can tell what kind of behavior is symptomatic of a larger problem and where the most common malfunctions occur. Troubleshooting your computers, peripherals and network is our specialty. With our knowledge, tools and experience, we quickly diagnose, isolate and resolve typical problems such as: network issues, file structure errors, hard drive troubles, RAM problems, etc. Be assured that hardware and/or software malfunctions will be corrected quickly. Save your company a bundle of money by slashing downtime.

**Workstation and Server Configurations**

We configure your computers, whether they are servers or workstations, so they run at peak performance. We know what each extension, control panel and system resource does for your system and which will cause software conflicts. Therefore, your machine has exactly what it needs . . . no more and no less. Precious hard disk space and costly RAM are wasted when "Easy Install" is performed. We will not only configure your new servers for optimal performance, but also squeeze every ounce of performance out of your existing hardware. Let a professional consultant configure and tweak your systems to run optimally.

**Upgrades and Repairs**

Need a larger hard drive? More RAM? A faster processor? Not sure? You may not need a new computer after all; an upgrade could be the answer! We'll tell you when you can save money by adding newer and faster cards and components to your existing system, and when it is better to buy a new one. When an upgrade is a consideration, we will provide you with all the facts and let you determine if the upgrade investment is worth the expense.

**Networking & Wired & Wireless**

Gear 3 Technologies will connect your office computers to each other, then connect them to the rest of the world! We are experienced with the leading architecture and protocols that ensure a network design that is user friendly, stable, and secure (keeping hackers out)! We'll not only protect your data from hackers, but also create a peaceful co-existence in a Mac/PC/Linux world, with protection against viruses. Gear 3 Technologies has the knowledge as well as the hardware and software utilities to optimize and maintain your network. We can increase your network's speed and perform daily network administration duties remotely. Get connected!

**Back-up Solutions**

Because every hard drive is destined to fail someday, backing up is essential! If you are on a network, we will create and implement a back-up strategy that will ensure all your servers, workstations and even laptops are backed up. Automated back-ups are scheduled during non-working hours. You never know when a fire, flood or theft will strike, so we can create a duplicate back-up set for you to keep off-site. Don't procrastinate; far too many people implement a back-up strategy only after a major data loss. Let Gear 3 Technologies develop your back-up plan today!

**Sales**

We deliver the exact products you need fast, and at very competitive prices. Many customers purchase from us because of our expertise on industry products and then realize that our prices are substantially lower than the mega computer stores. We are resellers mainly for the convenience of our customers. We provide them with the comfort of knowing the correct components, whether hardware or software, have been ordered and will be professionally installed.

IT Management

We can manage your IT department, keeping you and your technology organized. We have procedures for system configurations, back-up strategies, software and hardware inventory, system maintenance and network management proven to maximize your performance. Gear 3 Technologies can work with your current Systems Support person, or have one of our consultants assigned to manage your IT department. Managing your department can consist of visiting as required, perhaps two days a week, or if you wish, a full-time consultant can be assigned to your location.

The benefits of having a Gear 3 Technologies' consultant at your location is that our consultants use each other as resources. It is like having an IT staff operating your IT department. With Gear 3 Technologies, expert knowledge is only a phone call away.

We always stay abreast of the latest technological advances. Information on the latest CPUs, servers, hard drives, scanners, printers, video cards and other peripherals that will enhance your computer's performance and extend its usefulness is only a phone call away. Put an end to the frustration in your systems support department. Don't let them waste time and money while sitting on "technical support" hold or by using a "hit-or-miss" strategy because they can't get their technical questions answered quickly. Also, during times of major upgrades or network re-configurations, we can assemble a group of top notch consultants to get the job done professionally and in a timely fashion. Give your IT department, as well as your business, the technological edge to prevail . . .
